## Welcome to Linamar Corporation's Secure FTP Services

Linamar IT has implemented a new secure FTP site for encrypted file transfers between client/partners and Linamar employees.

These instructions have been created to provide you with the necessary steps in order to connect to Linamar's Secure FTP server.

Note: Linamar recommends using Filezilla as a free and effective FTP client that is available for free on the internet. You may use alternate FTP clients as well as command line interfaces, however FTP using an Internet Explorer (or other web browser) client is no longer supported. Your client must support SFTP to be able to communicate on port 22.

How to Connect to Linamar's SFTP Server:

1. Obtain your FTP credentials from your contact at Linamar.
2. Open your Secure FTP client (Filezilla used in this document)
3. Enter the following information:
   - Host: sftp.linamar.com
   - Username: Username you were provided
   - Password: Password you were provided
   - Port: 22
4. Press enter and you will be connected to the Secure FTP server.

5. Once connected locate the files from your Local Site (left hand pane) and drag and drop them to the Remote Site (right hand pane).
6. Once the transfer has completed (bottom pane) disconnect or close the SFTP client.
7. You have successfully transferred files to Linamar Corporation. Notify your contact at Linamar that you have successfully uploaded the files for their viewing.
